The claimed method and the associated Bluetooth node address the problem of avoiding interference from persistent interferers. The problem is solved by way of maintaining a black-list of worse performing frequency bands, and by transmitting dummy packets in a pattern which depends on the black-list.

Documents cited in the International Search Report:

D1: WO 02 30022 A
D2: WO 01 47308 A
D3: WO 99 09671 A
D4: EP 0 182 762 A

The cited documents represent the general state of the art. The invention defined in claims 1-4 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed method of avoiding interference caused from persistent interferers in a frequency hopping spread spectrum communication system, or a Bluetooth node adapted to operate in accordance with such a method. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-4 is novel and is considered to involve an inventive step. The invention is industrially applicable.
